After the form is submitted, the device appears in the listing immediately (no page refresh needed).

User story 3

As an Administrator I can list all devices

Description:
Administrator can list all the managed devices in a table. The table can be sorted by name, ISO country code and creation date.

User story 4

As an Administrator I can delete an existing device record

Description:
Administrator can delete one or multiple devices by selecting rows and then clicking on "Delete" button.
After they agree, device should be removed from the listing immediately (no page refresh needed).

Appendix

- Test all acceptance criteria mentioned in the story
- It's OK that tests are failing if the the webapp has bugs or missing functionality, however there should be at least one test that passes (happy path)
- Try to use element selectors that are future proof = tests won't break if there is a small textual change on the button label or CSS styling change
- Provide description on how to execute the test. Automated browser can be Chrome, Firefox or phantomjs. Tests don't have to run with all so specify which one you used.
